Research Summary

Wet-process battery separators are specialized components used in the manufacture of rechargeable batteries, particularly lead-acid batteries. These separators are typically made from a porous material such as polyethylene or rubber that is impregnated with an electrolyte solution. During the wet-process manufacturing method, the separator material is immersed in the electrolyte solution, allowing it to absorb and retain a sufficient amount of electrolyte. This electrolyte-filled separator is then placed between the positive and negative plates of the battery to prevent short circuits while allowing the flow of ions between the plates during charging and discharging cycles. Wet-process battery separators play a crucial role in optimizing the performance, reliability, and lifespan of lead-acid batteries by providing efficient ion transport, preventing plate-to-plate contact, and ensuring uniform electrolyte distribution within the battery cells.

The major global manufacturers of Wet-Process Battery Separators include Semcorp, Toray, Sinoma Science & Technology, SK Innovation, Senior Technology Material, Asahi Kasei, W-SCOPE, Teijin, Gellec, Jiangsu Beixing New Materials Technology,
