Research Summary

Wetsuits are specialized garments worn by individuals engaged in water sports and activities to provide thermal insulation and protection against cold water. These suits are typically made from neoprene, a synthetic rubber material that traps a thin layer of water between the suit and the wearer's skin. This layer of water is warmed by the body heat, creating a thermal barrier that helps to keep the wearer warm even in cold water.

Wetsuits come in various thicknesses and styles depending on the water temperature and the intended use. Full-length wetsuits cover the entire body, including arms and legs, while shorty wetsuits have shorter arms and legs, providing less coverage.

Wetsuits may also feature additional features such as reinforced knee pads, zippered closures, and different thicknesses in different areas for flexibility and comfort. Wetsuits are commonly used in activities such as surfing, diving, snorkeling, paddleboarding, and kayaking, providing comfort and protection in cold water environments.

The major global manufacturers of Wetsuits include O'Neill, Quiksilver, Billabong, Rip Curl, Body Glove, Aqua Lung, GUL, Hurley, Patagonia, Cressi, Osprey, Scubapro, Mares, Poseidon, Typhoon, TWF, Spartan, C-Skins, TUSA, Saekodive, etc. The global
