Research Summary

Wheat starch is a carbohydrate-rich substance derived from the endosperm of wheat grains. It is commonly used as a thickening agent, stabilizer, and texturizer in food manufacturing and cooking. Wheat starch is obtained by milling wheat grains to separate the starchy endosperm from the bran and germ. The starch is then extracted from the endosperm through a process of wet milling, where the starch granules are separated from other components of the wheat flour slurry. Once extracted, wheat starch can be further processed into various forms, including native wheat starch, modified wheat starch, and pregelatinized wheat starch, each with specific properties suited to different applications. Wheat starch is commonly used in food products such as soups, sauces, gravies, puddings, baked goods, and confectionery items to provide thickening, texture, and stability. Additionally, it is utilized in non-food applications such as adhesives, papermaking, textile sizing, and pharmaceuticals. Overall, wheat starch serves as a versatile and widely used ingredient in both the food and industrial sectors.

The major global manufacturers of Wheat Starch include Manildra, Tereos, Roquette, Cargill, MGP Ingredients, ADM, J?ckering-Group, Crespel & Deiters, Sedamyl, Kroener
