Research Summary

A White Box Switch Network Operating System (NOS) is a software platform designed to run on white box switches, which are hardware devices manufactured by third-party vendors and decoupled from the software. Unlike traditional network switches, which come with proprietary software pre-installed, white box switches allow users to choose and install their preferred operating system. The White Box Switch NOS provides the functionality needed to manage and operate the switch, including features like packet forwarding, VLAN management, Quality of Service (QoS) configuration, and network monitoring. These operating systems are typically based on open-source software such as Linux or OpenSwitch and are designed to be highly flexible, customizable, and interoperable with various networking protocols and technologies. White Box Switch NOS solutions enable organizations to build cost-effective, scalable, and agile network infrastructures tailored to their specific requirements.
