### Research Summary

White Portland cement is a specialized type of cement distinguished by its white color, which is achieved through the use of raw materials low in iron and manganese oxide content. Similar to traditional gray Portland cement, white Portland cement is made by grinding clinker (a mixture of limestone and other materials) with gypsum to create a fine powder. However, the raw materials used in white Portland cement production are selected to minimize impurities that could affect the final color. White Portland cement is commonly used in architectural and decorative applications where a clean, bright appearance is desired. It offers the same strength and durability as gray Portland cement but provides a uniform white color, making it ideal for applications such as precast concrete, architectural concrete, tile grouts, and decorative finishes. Additionally, white Portland cement can be tinted with pigments to achieve custom colors, offering versatility in design and construction projects.
