Research Summary

A windshield wiper is a mechanical device used on vehicles to clear rain, snow, or debris from the windshield, improving visibility for the driver. Typically consisting of a metal arm with a rubber blade attached to it, windshield wipers are powered by an electric motor or pneumatic mechanism. When activated by the driver from inside the vehicle, the wiper arm moves back and forth across the windshield, sweeping away moisture or debris. Modern vehicles often feature variable-speed windshield wipers with adjustable settings to accommodate different weather conditions. Some vehicles also include windshield wiper systems with integrated washer jets, which spray cleaning fluid onto the windshield to help remove stubborn dirt or grime. Overall, windshield wipers play a crucial role in ensuring safe driving by maintaining clear visibility in adverse weather conditions.
