Research Summary

Wire thread inserts, also known as threaded inserts or helical inserts, are cylindrical metal components with internal threads used to reinforce and repair threads in materials such as metal, plastic, or composite materials. They are typically made of materials like stainless steel, brass, or aluminum and come in various sizes and thread configurations to match different bolt sizes and thread types. Wire thread inserts are installed by tapping or drilling a hole in the parent material to the required size and thread pitch, followed by screwing or pressing the wire thread insert into the hole using a specialized installation tool. Once installed, wire thread inserts provide a durable and wear-resistant internal thread that helps prevent thread stripping, galling, or wear, making them essential in industries such as automotive, aerospace, and machinery manufacturing for creating reliable and long-lasting threaded connections.

The major global manufacturers of Wire Thread Inserts include B?llhoff, STANLEY Engineered Fastening, AMECA, KATO Fastening Systems, Recoil (Howmet Fastening Systems), HONSEL, KVT-Fastening (Bossard), Shenyang Helisert, Helical Wire, Inc.,
