### Research Summary

Wireless communication technology for vehicles encompasses a range of technologies and protocols designed to facilitate communication between vehicles (V2V communication) and between vehicles and infrastructure (V2X communication). These technologies enable vehicles to exchange information wirelessly, enhancing safety, efficiency, and convenience on the road. Key wireless communication technologies for vehicles include Dedicated Short-Range Communications (DSRC), Cellular Vehicle-to-Everything (C-V2X) communication, and Wi-Fi-based protocols such as IEEE 802.11p. DSRC operates in the 5.9 GHz frequency band and is specifically designed for low-latency, high-reliability communication between vehicles and infrastructure elements like traffic lights and road signs. C-V2X, based on cellular networks, allows vehicles to communicate with each other, infrastructure, pedestrians, and cloud services, offering versatility and scalability. Wi-Fi-based protocols like IEEE 802.11p are also used for V2V and V2X communication, providing high-speed data transmission and connectivity.
