### Research Summary

A wireless HDMI video transmitter is a device that allows users to transmit high-definition video and audio signals from a source device, such as a computer, Blu-ray player, or gaming console, to a display device, such as a television or projector, without the need for physical cables. These transmitters typically consist of a transmitter unit that connects to the source device and a receiver unit that connects to the display device. They utilize wireless technology, such as Wi-Fi or radio frequency (RF), to transmit the HDMI signals over a short distance, usually within the same room. Wireless HDMI transmitters offer the convenience of cable-free connectivity, allowing users to easily stream content from their devices to a larger screen for enhanced viewing experiences. They are commonly used in home entertainment systems, conference rooms, and classrooms to eliminate cable clutter and provide flexible placement options for display devices. When selecting a wireless HDMI video transmitter, factors to consider include transmission range, signal quality, latency, compatibility with devices and resolutions, and additional features such as support for multiple inputs or wireless audio transmission.
