Research Summary

Wireless Pick to Light (PTL) is a sophisticated system utilized in warehouse and distribution environments to streamline order picking processes. It comprises wireless light display modules installed at storage locations, wireless communication devices, and a central control system. The system wirelessly communicates picking information such as item details, quantities, and order numbers to the light modules. When a picker arrives at a location, the corresponding light module illuminates, indicating the items to be picked. The picker confirms the pick, and the system updates the status wirelessly. Wireless PTL systems improve picking accuracy, efficiency, and productivity by providing clear visual cues, eliminating paper-based picking processes, and allowing for real-time tracking and optimization of picking tasks within the warehouse or distribution center.

The major global suppliers of Wireless Pick to Light include Daifuku, Honeywell Intelligrated, Lightning Pick (Matthews International), Aioi-Systems, Atop Technologies, Banner Engineering, Hans Turck GmbH, ULMA Handling Systems, KFI, Falcon
