### Research Summary

Wiring duct, also known as cable duct or cable trunking, is a type of protective enclosure used to organize, protect, and manage electrical wires, cables, and conduits in building wiring systems and industrial installations. It consists of a rigid or semi-rigid channel typically made of plastic, metal, or composite materials, with a removable or hinged cover for easy access to the wires inside. Wiring ducts are designed to contain and route cables neatly, preventing tangling, damage, and interference between different cables or wires. They also offer protection against mechanical impact, dust, moisture, and accidental contact, enhancing overall safety in electrical installations. Wiring ducts come in various sizes, shapes (such as straight ducts, elbows, tees), and configurations (such as slotted ducts for cable entry/exit) to accommodate different wiring layouts and requirements. They are commonly used in residential, commercial, and industrial buildings, control panels, equipment cabinets, and machinery to organize and manage electrical wiring systems efficiently.

The major global manufacturers of Wiring Duct include ABB, Panduit, Phoenix Contact, HellermannTyton, KSS, KOWA KASEI, OMEGA Engineering, IBOCO (Hager Group),

Leviton, etc. The global players competition landscape in this report is divided into three tiers.
