Research Summary

Wood-based panels are engineered wood products made by combining wood fibers, particles, or veneers with adhesives and compressing them under heat and pressure to form rigid panels. These panels are versatile building materials used extensively in construction, furniture manufacturing, interior design, and various other industries. Common types of wood-based panels include plywood, particleboard, oriented strand board (OSB), and medium-density fiberboard (MDF). Each type has unique properties and applications; for example, plywood offers strength and dimensional stability, particleboard is cost-effective and smooth-surfaced, OSB is durable and moisture-resistant, while MDF provides a smooth and uniform surface ideal for painting and finishing. Wood-based panels are favored for their structural strength, uniformity, sustainability (using wood fibers and residues), and ability to be customized for specific applications, making them integral to modern building and manufacturing processes.

The major global manufacturers of Wood Based Panel include Kronospan, Arauco, Daiken New Zealand, Duratex, Georgia-Pacific, Masisa, Swiss Krono Group, Norbord,
