Research Summary

Wood pulp is a fibrous material produced from wood fibers through a mechanical or chemical process. It is a primary raw material used in the production of paper, cardboard, and various other cellulose-based products. Wood pulp can be made from both hardwood and softwood trees, and the process typically involves several stages. In mechanical pulping, wood is mechanically ground or shredded to separate the fibers, resulting in a pulp with relatively long fibers but lower quality. Chemical pulping, on the other hand, involves treating wood chips with chemicals to dissolve lignin and separate the fibers, producing a pulp with higher quality and strength. Wood pulp is then bleached and refined to improve its brightness, cleanliness, and uniformity before being used in papermaking. It is a versatile material with applications in printing and writing papers, packaging materials, tissue papers, and specialty papers, among others. Wood pulp plays a crucial role in the paper and pulp industry, serving as the foundation for a wide range of everyday products.

The major global manufacturers of Wood Pulp include Stora Enso, Suzano, RGE, Sappi, UMP, ARAUCO, CMPC, APP, Metsa Fibre, IP, Resolute, Domtar, Ilim, Sodra
