Research Summary

Wood tar is a dark, viscous liquid substance produced through the destructive distillation or pyrolysis of wood materials such as pine, birch, or hardwoods. This process involves heating wood in the absence of air, leading to the decomposition of wood components into tar, gases, and charcoal. Wood tar contains a complex mixture of organic compounds, including phenols, creosols, and hydrocarbons, which contribute to its distinct odor and properties. Historically, wood tar has been valued for its natural preservative properties, making it useful for treating wood against decay and pests. It has also been utilized as a waterproofing agent for ropes, boats, and wooden structures. Additionally, wood tar and its derivatives have found applications in traditional medicine, industrial processes, and specialty products due to their unique chemical composition and characteristics.

The major global manufacturers of Wood Tar include Auson, Skandian Group, Xinzhongxing Biomass, Verdi Life, Kemet, Lacq, Fusheng Carbon, Shuanghui Active Carbon, Albert Kerbl, S.P.S.
