Research Summary

Wool worsted yarn is a type of yarn made from long-staple wool fibers that are combed, parallelized, and spun into a tightly twisted strand. The term 'worsted' refers to the spinning method used to create this yarn, which results in a smooth, dense, and durable yarn with excellent stitch definition. Worsted yarns are known for their fine texture, strength, and ability to showcase intricate stitch patterns and cables in knitting and crochet projects. They are often used in making garments such as sweaters, cardigans, scarves, hats, and blankets due to their warmth, softness, and longevity. Worsted yarns come in a range of weights from fine to bulky, allowing for versatility in creating lightweight or heavy-textured fabric depending on the project's requirements. The high-quality wool fibers used in worsted yarns can come from various sheep breeds known for their fine wool, such as Merino, Bluefaced Leicester, and Corriedale, resulting in different textures, softness levels, and natural colors in the finished yarn. Worsted yarns may also be blended with other fibers such as silk, alpaca, or synthetic fibers to enhance properties like drape, sheen, or washability while maintaining the yarn's integrity and stitch definition.

The major global manufacturers of Wool Worsted Yarn include Y?nsa, Tollegno 1900, Suedwolle Group, Novita, Boyner Sanayi, Zegna Baruffa Lane Borgosesia, The Fibre Co, Di.V?, E.Miroglio, Schoeller, Transilana, SC Stofe Buhusi, ESRA, Egara de Hilados, etc. The global players competition landscape in this report is divided into three tiers.
