Research Summary

Woven fabric is a type of textile material created by interlacing two sets of yarns or threads at right angles to each other. The vertical yarns are called warp yarns, while the horizontal yarns are known as weft or filling yarns. The process of weaving involves passing the weft yarn over and under the warp yarns in a systematic pattern to create a stable and structured fabric. This interlacing of yarns forms the characteristic weave pattern of woven fabrics, such as plain weave, twill weave, satin weave, and others, each with distinct properties and appearances. Woven fabrics can be made from various natural fibers (cotton, wool, silk) or synthetic fibers (polyester, nylon, rayon) or blends of both. They are known for their strength, durability, breathability, and versatility, making them suitable for a wide range of applications in clothing, home textiles, upholstery, and industrial uses. The characteristics of woven fabrics, including their texture, drape, and strength, can be further customized based on factors like yarn type, weave pattern, and finishing treatments applied during manufacturing.

The major global manufacturers of Woven Fabric include Toray, Toyobo, Adient, Glen

Raven, KD Tech, HYOSUNG, Toyota Boshoku, BW Techtexile, SHENDA, Avic Chengdu Hairong, etc. The global players competition landscape in this report is divided into three tiers.
