Research Summary

Xerographic paper, also known as laser printer paper or photocopier paper, is a type of paper specifically designed for use in xerographic and laser printing processes. It is engineered to work efficiently with electrostatic printing technologies, such as photocopiers and laser printers, which utilize toner to produce images and text on the paper. Xerographic paper is made with properties that ensure optimal performance in these printing methods, including smoothness, opacity, and dimensional stability. The smooth surface allows toner particles to adhere accurately and uniformly, resulting in sharp and clear printouts. Its high opacity prevents show-through, ensuring that printing on both sides of the paper remains legible. Additionally, the dimensional stability of xerographic paper prevents curling and wrinkling during printing, leading to consistent and reliable output. Xerographic paper is widely used in offices, schools, and businesses for everyday printing needs due to its compatibility with laser printers and photocopiers and its ability to deliver high-quality print results.

The major global manufacturers of Xerographic Paper include International Paper, Domtar, Georgia-Pacific, Sappi, Nippon Paper Industries, UPM, Stora Enso, Mondi
