### Research Summary

Xylitol is a sugar alcohol commonly used as a sugar substitute due to its sweetness and low calorie content. It is naturally found in small amounts in various fruits and vegetables, but commercial xylitol is typically produced from birch bark, corn cobs, or other plant materials through a hydrogenation process. Xylitol has a similar sweetness to sucrose (table sugar) but with around 40% fewer calories. It is popular in sugar-free chewing gums, candies, toothpaste, and other oral care products due to its non-cariogenic (non-tooth-decaying) properties and ability to inhibit the growth of bacteria that cause tooth decay. Xylitol is also used as a sugar substitute in diabetic-friendly foods and beverages because it has a minimal effect on blood sugar and insulin levels. Additionally, xylitol has cooling properties, making it a common ingredient in sugar-free mints and gums. However, excessive consumption of xylitol can cause digestive issues such as bloating or diarrhea in some individuals, so moderation is recommended.

The major global manufacturers of Xylitol include Danisco, Roquette, Futaste, Huakang, Shandong LuJian Biological, Shandong Longlive Bio-Technology, Yuxin Xylitol Technology, etc. The global players competition landscape in this report is divided into
