Research Summary

Xylylene diisocyanate (XDI) is a chemical compound belonging to the diisocyanate family, which is widely used in the production of polyurethane polymers and resins. It is derived from the reaction of xylylene diamine with phosgene, resulting in a compound with two isocyanate functional groups ($-N=C=O$). Xylylene diisocyanate is commonly used as a raw material in the synthesis of polyurethane foams, coatings, adhesives, elastomers, and other polyurethane-based products. These materials find applications in various industries such as construction, automotive, furniture, textiles, and coatings due to their versatility, durability, and chemical resistance properties. However, like other diisocyanates, XDI can pose health risks if not handled properly, such as skin and respiratory irritation or sensitization. Therefore, proper safety measures, including adequate ventilation and personal protective equipment, should be employed when working with Xylylene diisocyanate and related products.

The major global manufacturers of Xylylene Diisocyanate (XDI) include Mitsui Chemicals, Hangzhou Brown Bio-Pharm, Wanhua Chemical Group, Beijing Yuji
