### Research Summary

Zinc-nickel alloy coatings are metallic coatings applied to substrates through various processes such as electroplating or hot-dipping, resulting in a layer that combines zinc and nickel in varying proportions. This alloy coating offers superior corrosion protection, wear resistance, and enhanced adhesion compared to pure zinc or nickel coatings. The zinc-nickel alloy provides sacrificial protection, where the zinc component corrodes preferentially to protect the underlying substrate. The addition of nickel enhances the hardness, durability, and overall performance of the coating, making it suitable for demanding applications in industries such as automotive, aerospace, marine, and industrial equipment. Zinc-nickel alloy coatings can be further modified with post-treatments such as chromates or sealers to improve their performance and appearance, making them a versatile and effective solution for corrosion protection and surface enhancement needs.

The major global manufacturers of Zinc-Nickel Alloy Coatings include Micro Metal Finishing, LLC, DeKalb Metal, Techmetals, Inc., KC Jones Plating, City Plating, Gatto

Industrial Platers, Inc., Har-Conn, Wisconsin Plating Works, Chem Processing Inc., Greensboro Industrial Platers, Saporito Finishing, D&W Plating Company, Inc., JMD Industries, Inc, etc. The global players competition landscape in this report is divided into three tiers.
