Research Summary

Zirconia beads, also known as zirconium oxide beads or ceramic beads, are small spherical particles made from zirconium dioxide (ZrO₂). These beads are engineered to have high strength, hardness, and wear resistance, making them ideal for various applications in industries such as materials processing, grinding and milling, and biomedical engineering. In materials processing, zirconia beads are used as grinding media in ball mills and attritors for milling and dispersing purposes. They are particularly effective in milling high-viscosity or abrasive materials such as pigments, minerals, and ceramics due to their toughness and uniform particle size. In biomedical engineering, zirconia beads are used as fillers in dental composites and as components in medical implants and prosthetics due to their biocompatibility and resistance to corrosion in biological environments. The precise control of size and composition in zirconia beads allows for tailored properties suitable for a wide range of advanced applications.

The major global manufacturers of Zirconia Beads include Saint-Gobain ZirPro, Tosoh, Dynamech, Toray, Orient Zirconic, CENOTEC, CHEMCO, Kallex Company, Zhejiang
