### Research Summary

Zirconia dental material refers to zirconium dioxide (ZrO<sub>2</sub>) ceramics that are used in dentistry for various restorative and prosthetic applications. Zirconia dental materials are valued for their excellent mechanical properties, biocompatibility, and aesthetic appeal, making them a popular choice in modern dentistry. These materials are often used to create dental crowns, bridges, implant abutments, and dental prostheses due to their high strength, durability, and natural tooth-like appearance. Zirconia restorations can be milled using computer-aided design and computer-aided manufacturing (CAD/CAM) technology, allowing for precise customization and a perfect fit for each patient. Additionally, zirconia dental materials are resistant to staining, corrosion, and wear, providing long-lasting and aesthetically pleasing dental restorations. They are compatible with oral tissues, reducing the risk of allergic reactions or tissue irritation, and offer patients durable and functional dental solutions with excellent aesthetic results.

The major global manufacturers of Zirconia Dental Material include Ivoclar Vivadent,
