Research Summary

Zirconium phosphate refers to a group of inorganic compounds that contain zirconium cations (Zr^{4+}) and phosphate anions (PO_4^{3-}). The most common form is zirconium orthophosphate ($Zr(PO_4)_2$), which is a white crystalline powder insoluble in water. Zirconium phosphate has excellent thermal stability, chemical inertness, and ion-exchange properties, making it valuable in various applications. It is widely used as an ion-exchange material in chromatography columns for separating and purifying biomolecules such as proteins and nucleic acids. Zirconium phosphate is also utilized as a catalyst support in chemical reactions, a flame retardant additive in plastics and polymers, and an adsorbent for removing heavy metals from wastewater. In the nuclear industry, zirconium phosphate compounds are explored for their potential use in nuclear waste immobilization and storage due to their stability under harsh conditions. Overall, zirconium phosphate's unique properties make it a versatile material with applications in analytical chemistry, materials science, environmental remediation, and nuclear technologies.

The major global manufacturers of Zirconium Phosphate include Sunshine Technology Co., Ltd, Sigma-Aldrich (Merck), American Element, ZIRCOMET LIMITED, BOC Sciences, Hi-Lyte, etc. The global players competition landscape in this report is divided into three tiers.
