### Research Summary

Zirconium silicate, also known as zircon, is a naturally occurring mineral composed of zirconium silicate ( $ZrSiO_4$ ). It is mined from mineral sands deposits and processed into a fine powder for various industrial applications. Zirconium silicate is valued for its high refractive index, chemical inertness, and heat resistance, making it useful in diverse industries. In the ceramics industry, zirconium silicate is a key ingredient in ceramic glazes, opacifiers, and pigments due to its ability to impart whiteness, brightness, and durability to ceramic products. It is also used as a raw material in the production of zirconium compounds such as zirconium dioxide (zirconia), zirconium oxychloride, and zirconium sulfate, which find applications in catalysts, refractories, ceramics, and nuclear technology. In the foundry and casting industry, zirconium silicate is used as a mold material for metal casting due to its thermal stability and resistance to molten metals. Additionally, zirconium silicate has niche applications in the production of specialty glasses, abrasives, and dental ceramics.

The major global manufacturers of Zirconium Silicate include JINGJIEHUI GROUP,
