Research Summary

A zirconium target refers to a solid piece or disk of high-purity zirconium metal used in physical vapor deposition (PVD) and sputtering processes. Zirconium targets are essential components in thin film deposition techniques used in semiconductor manufacturing, optical coatings, and surface engineering applications. During sputtering, high-energy ions bombard the zirconium target, causing atoms to be ejected from the target surface. These ejected atoms then condense onto a substrate, forming a thin zirconium film with precise thickness and uniformity. Zirconium targets are available in various shapes and sizes to fit specific sputtering equipment and deposition requirements. They are manufactured with high purity levels to ensure the quality and properties of the deposited zirconium films, which exhibit excellent corrosion resistance, heat resistance, and mechanical properties. Zirconium targets play a crucial role in producing functional coatings for electronic devices, solar panels, architectural glass, and decorative finishes, among other applications in advanced materials and technology industries.

The major global manufacturers of Zirconium Target include Lesker, SAM, Nexteck,

ZNXC, CXMET, Firmetal, Fine Metals, Advanced Engineering Materials, Haohai Sputtering Targets, Plansee, Boxin Metal Materials, Heeger Materials, EVOCHEM Advanced Materials, ADVANTEC, Umicore, UVTM, etc. The global players competition landscape in this report is divided into three tiers.
