Abstracts

Although, India is among the top ten military spenders in the world. However, unlike other geographies which have large defence industries to support their domestic needs, Indian requirements are primarily met by government players into the domain and imports. With importing nearly USD 5.5 Billion worth of military hardware, India has emerged as the largest arms importer in the globe accounting nearly 15% of such imports internationally. Hence self-reliance to sustain the needs of Indian defence sector is of vital importance for strategic and economic reasons. Since the government has been assiduously working upon building the defence manufacturing capabilities over the years. But to look beyond the customary curve, “Make in India” has triggered the positive sentiments for making India to stand at par with its global counterparts with respect to its in house defence manufacturing competencies.
