### **Abstracts**

This is the UPCOMING report. If ordered it could be delivered by the date of issue.

The growth of Indian upstream sector was plagued mainly by poorly explored sedimentary basin, declining private and foreign participation, lack of proper technology and non-transparent policies. In order to reduce the import dependence of the country, the government has taken many measures to ramp up domestic production like introduction of HELP, 100% FDI in upstream, auctioning of 67 Small Oil and Gas Fields with newly introduced investor friendly terms, Pricing freedom of gas produced from difficult fields etc. In the case of Midstream many new pipelines are coming up across different states to provide an unbiased access of hydrocarbons to meet their energy demand. For downstream, the deregulation of Petrol and Diesel prices along with the increase of automobile population attracts private players who are existing as well as new to the Indian Fuel retailing segment. The anticipated increase in fuel demand as well as government initiatives like increasing the customer base of LPG consumers, upgradation of automobile fuel from BS-IV to BS-VI by 2020 etc. calls for many green and brown field refinery projects. The expected futuristic growth of Indian Oil and Gas Sector holds immense conventional as well as novel opportunities for the investors to explore.
