## Abstracts

The FY (Fiscal Year) 2015-16 is turning out to be a phenomenal year for the Indian power sector with the record power (Renewable) capacity addition, power generation and even a record domestic coal production. The present government's emphasis on improving the power situation of the nation is finally taking some shape, and the same is expected to continue in the near space. The power sector is expected to come out of the lull phase which would ensure better installed capacity realization and reduction in idle/ bad assets for the market participants. Maximum investments are likely to make its way via private channels across the three segments. In addition to this the Indian power sector is likely to draw investments from new avenues like middle –east. It is pertinent to note that the power sector is expecting an investment of close to USD 228.75 billion by the end of 12th FYP of which private sector contribution would be 60%.
