## Abstracts

The production of olive oil in 2023 has been slowing in 2023 due to two crucial factors: adverse weather conditions and the increasing cost of fertilisers. Weather conditions have a significant impact on olive tree cultivation and subsequently on olive oil production. Extreme weather events such as droughts that the southern regions of Chile are experiencing can severely damage olive trees, leading to significantly reduced yields. Climate change has been causing unpredictable weather patterns, m...

Euromonitor International's Edible Oils in Chile report offers in-depth knowledge of the market at a national level, providing local insight and understanding unavailable elsewhere.
