Abstracts

The increasing frequency of high temperatures and periods of prolonged drought, followed by heavy showers, is believed to have encouraged the spread of insect infestations in Italy during the review period. In addition to the usual infestations in spring and summer, this extreme weather, thought to be driven by climate change, led to a proliferation of mosquitos and other insects during other periods of the year. Moreover, towards the end of the review period, Italians faced the additional threa...

Euromonitor International's Home Insecticides in Italy market report offers a comprehensive guide to the size and shape of the market at a national level. It provides the latest retail sales data (historic date range), allowing you to identify the sectors driving growth.
