Abstracts

The automation of home laundry has sat in R&D technology pipelines for decades, usually as a “blue sky” ideal to strive for. IFA 2017 and CES 2018 both revealed new technologies as well as an interesting new process philosophy that serves to re-frame this topic. Automation across the laundry process is now seen as more feasible and inside a more realistic device footprint. A post-2020 full solution is in the works and its proliferation has become a calculation of when...not if.
