## Abstracts

In 2019, China's major industries recorded slower growth, which was reflected in a slowdown in the country's electricity output growth. The Chinese National Statistics Office reported that in 2019, the country's industrial output rose by only 4%, which was the slowest pace of growth since 2002. Most of the country's main industries, such as chemical products, automotive, and textile and leather products, lost pace in growth over the year, causing a slowdown in growth in electricity consumption.
