Excerpts from the study:

'As a result of the global germanium market analysis we can draw the following conclusions about the prospects of its development:

There are two possible scenarios in the market: a base and a conservative scenario. The baseline scenario assumes annual average growth of global production volumes of germanium in the amount of + xx% per year, and conservative - xx.

In our view it is unlikely that the current crisis processes in the world economy will affect the German market. Do not expect that the recession in the economies of individual countries will lead to a decrease in the supply / demand for germanium and derivatives thereof.

In the future, the international price of Ge and its derivatives slightly increase both the base and the conservative scenarios of market development at the rate of PPI inflation index. Also, each year there will be a seasonal fluctuation in demand for Ge and its derivatives up to +/- xx%. '
