Abstracts

The market for aluminum composite panels (ACP) is on an upward trajectory, projected to reach USD 10.04 billion by 2033. This represents a significant increase from its 2023 size of USD 6.34 billion, with a steady CAGR of 5.32% anticipated over the next decade. ACPs are panels made by bonding thin aluminum sheets to a core of polyethylene or a mineral-based material. These lightweight yet durable panels are popular in building construction for both interiors and exteriors due to their versatility. Their light weight makes them ideal for modern designs, while their durability ensures they can withstand various environmental factors. This combination of features makes them a compelling choice for architects and builders.
