Abstracts

The Organic Feed Market is projected to reach USD 14.65 billion by 2033, growing from USD 7.12 billion in 2023 at a compound annual growth rate (CAGR) of 8.74%. This market encompasses organic feed products used in raising livestock, poultry, and aquatic animals. The significant growth is driven by rising consumer demand for organic meat and poultry, coupled with a focus on enhancing feed quality to boost animal health and productivity. The market is segmented by livestock type, form, and specific needs, with various organic feed options available. Factors influencing the market include regulations on organic food production, certification standards, and consumer perceptions about organic practices. Although organic farming is associated with higher production costs and lower yields compared to conventional methods, leading to higher consumer prices, it remains appealing due to its benefits for personal health and environmental sustainability.
