Abstracts

The Phytogetic Feed Additives market is projected to reach USD 2.14 billion by 2033, growing from USD 0.96 billion in 2023, with an expected compound annual growth rate (CAGR) of 8.67% from 2023 to 2033. Phytogetic feed additives, also known as PFAs or botanicals, are plant-derived substances incorporated into animal diets to boost performance. These additives, which include essential oils, herbs, and spices rich in bioactive compounds like phenols and flavonoids, offer benefits such as antioxidative, anti-inflammatory, antimicrobial, and digestive-enhancing effects. Common sources of phytogetics include oregano, thyme, garlic, horseradish, chili, peppermint, cinnamon, and anise. While phytogetics show potential for enhancing animal health and growth, ongoing research aims to fully validate their effectiveness, particularly as alternatives to traditional in-feed antibiotics.
