Market Overview

Antistatic tropical chemicals are used to coat anti-static films. Electric charges tend to accumulate in materials with low conductivity and high surface resistance, such as plastics. Such static accumulation is harmful and interferes with the processing and manufacture of polymers by slowing down the technical process, creating material losses, contaminating the result, and hastening the breakdown of plastics. Therefore, anti-static compounds must be included in plastics.

Furthermore, the inclusion of new ideas used in the automobile sector would improve the product's functionality. It would, in effect, help the anti-static film business gain traction in the coming years. Anti-static films are used to safeguard items from physical harm during transportation. Anti-static films are also used to package food, beverages, medicines, and other items.

Growth Factor

Preference for Flexible Packaging in Pharmaceutical Industry

Rigid packaging was utilized in the pharmaceutical sector for a range of goods until recently. Now, anti-static films are in high demand as this trend is gradually being replaced by flexible packaging materials. Flexible packaging items constructed of anti-static films, such as bags, pouches, and sacks, are used to store a wide range of pharmaceutical and medical goods. In the pharmaceutical sector, the growing demand for flexible packaging, particularly for high-performance applications, is projected to provide new market possibilities for anti-static films.

Anti-static films are expected to be in high demand throughout the forecast period due to increasing strain on healthcare systems, the complexity of illnesses, and rising hospital admissions.
