## **Abstracts**

### Market Overview

Steam tables, also known as hot food tables, are used to keep food warm and at predetermined serving temperatures. They're not meant to cook or reheat food from hazardous or uncooked temperatures; rather, they're meant to keep food at a consistent temperature when serving. Commercial steam tables are used to heat meals to the perfect temperature on a flat warming surface with an interior temperature regulator. Food warmers are a small but important business. Keeping food at the proper temperature reduces the risk of food-borne disease. Kitchens, buffets, cafeterias, and hotels are all good places to utilize them. They usually include two or more compartments for full-size pans or a mix of smaller pans. They're made to accommodate a variety of food items, making your display more convenient and adaptable.

Growth Factor

Increasing cautiousness to consume food at ideal temperature

The market for commercial steam tables is being driven by an increase in demand for maintaining an appropriate temperature for the food being served. To reduce the amount of germs in food and achieve a safe level for eating, it must be heated to at least 75 degrees. When it comes to preparing or rewarming food, the temperature is just as important as putting it away. Furthermore, as a result of the spread of the coronavirus, customers are more conscious of what they are eating and are more inclined to warm dishes while dining out or at a gathering. This would aid in the expansion of the market for commercial steam tables.
