PRODUCT OVERVIEW

Healthcare Artificial Intelligence Market size was USD 11.8 billion in 2021 and projected to grow from USD 21.7 billion in 2023 to USD 450.0 billion by 2032, exhibiting a CAGR of 40.0% during the forecast period.

Healthcare AI, in medical context, is the use of machine learning algorithms and most other cognitive technologies. AI specifically refers to the ability of computers and other technologies to replicate human intellect and think, take decisions, and learn or other activities. Combining patient insights can produce predicted benefits due to AI's ability to handle massive data sets, which can assist the healthcare ecosystem in identifying the most important patient care areas that need to be improved.

MARKET HIGHLIGHTS

The Healthcare Artificial Intelligence Market is expected to reach USD 450.0 billion, growing at a CAGR of 40.0% during the forecast period owing to the growing complexity of datasets and the abundance of healthcare data, which demands AI's use in healthcare. The demand for spontaneous healthcare services is also supported by a drop in hardware costs and improvements in computer power, the rise in cross-industry cooperations, and a growing difference between the health workforce and the patient population.
