## **PRODUCT OVERVIEW**

ISO Containers Market is anticipated to exhibit a Compound Annual Growth Rate (CAGR) of 6.8% during the forecast span from 2024 to 2034. In 2023, the market size was assessed at USD 0.4 billion and is projected to reach USD 0.9 billion by the completion of 2034.

ISO containers, also known as intermodal containers, are standardized metal boxes used for transporting goods across various modes of transportation such as ships,

trains, and trucks. These containers follow International Organization for Standardization (ISO) guidelines, ensuring consistency in dimensions, design, and construction. They are composed of steel and have standard corner fittings for easy transportation with cranes or special machinery. They are available in a variety of sizes, including 20-40- and 10-45-foot containers. Furthermore, ISO containers are useful for transportation and storage due to their durability, weather resistance, and ability to be loaded securely. Their impact on global trade has been significant as they enhanced the process of loading and unloading cargo between various modes of transport, without the need to unpack or repack goods. Therefore, owing to their flexibility and durability, ISO containers are widely used for shipping goods such as raw materials and finished products, across continents.

## MARKET HIGHLIGHTS

ISO Containers Market is projected to achieve USD 0.9 billion during the forecast period, owing to the continuous increase of international trade, along with the rapid expansion of the e-commerce sector. ISO container market witnessed significant expansion due to the emergence of advanced technologies, such as the innovation of smart containers which are equipped with tracking and monitoring capabilities. These innovations enhanced the security of cargo and provide real-time surveillance of products during transit. Moreover, there was an increase in the demand for specialized containers like reefers, which are designed for perishable goods, and tank containers, that aid in the transportation of liquid cargo. Furthermore, the growing emphasis on sustainability and environmental awareness promotes the development of eco-friendly containers to minimize carbon footprints during the transportation process. Therefore, the combination of these aspects influences the developments in ISO container market.
