PRODUCT OVERVIEW

Mining Chemicals Market size was USD 10.14 billion in 2021 and projected to grow

from USD 11.5 billion in 2023 to USD 20.6 billion by 2032, exhibiting a CAGR of 6.7% during the forecast period.

Mining chemicals are the chemicals used in various mining processes at different stages and these compounds aid in enhancing the efficiency and production of mining activities by generating an effortless environment thereby boosting the capacity of production. Mining chemicals are corrosive in nature and are very expensive. Mining chemicals used involve flocculants, frothers and collectors, rheology modifiers, solvent extractants, and wet- and dry-grinding aids. Mining chemicals have a vital role in mineral ores processing. Metal mining processes need mining chemicals to process the respective ores.

MARKET HIGHLIGHTS

Mining Chemicals Market is expected to reach USD 20.6 billion, growing at a CAGR of 6.7% during forecast period owing to the increasing demand for specialized chemicals like defoamers, biocides, corrosion inhibitors, dust suppressants etc. which is expected to boost the market growth. The adoption of price-cutting programs in mining field and inclusion of newer technologies for enhanced quality processes and production are anticipated to drive the demand for the growth of the market. Increasing necessity to manage emissions of greenhouse gas may boost the mining chemical market growth.
