## Abstracts

### Market Overview

Seitan, commonly known as wheat gluten, is a popular vegan meat replacement produced primarily from wheat and occasionally from chickpeas. Seitan Powder is a healthy meal that contains hydrated gluten, a high number of proteins and minerals, and a low level of carbs and fat. The use of seitan in the manufacturing of a variety of ready-to-eat foods has raised demand for seitan across the world. Seitan is a meat substitute whose popularity is being fueled by shifting dietary trends that favor plant-based protein over animal protein. The rising consumer awareness of health issues such as cardiovascular illnesses, bodily aches, cholesterol control, and others is expected to propel the seitan market. Seitan has a strong similarity to meat in terms of look and feel, and the usage of seitan in the vegan business is projected to improve the plant-based meat business as the vegan population grows in many nations.

#### Growth Factor

Higher demand for plant-based meat products

Plant-based protein components have shown to be a more effective meat alternative.

This is owing to their high protein content, as well as their texture, which improves the

end product's taste. Because of the high protein content of soy-based meat

replacement goods such as pig, beef, and chicken, the market for soy protein

accounted for the largest market share in the market. Another cause might be the

growing popularity of healthy and vegetarian diets. Unlike animal protein diets, soy-

based meals are cholesterol-free and an excellent source of fiber. During the projected

period, these characteristics have proven to be beneficial to the soy protein segment
