PRODUCT OVERVIEW

Solar PV Market size was USD 149.92 billion in 2021 and projected to grow from USD 165.5 billion in 2023 to USD 260.3 billion by 2032, exhibiting a CAGR of 5.2% during the forecast period.

A solar photovoltaic (PV) system includes solar panels with an inverter and other mechanical and electrical hardware that transform sunlight into electrical energy. It depends on mounting structures that focus panels toward the sun for changes direct current into alternating current and is utilized to produce clean and green energy thereby, reducing the air pollution along with emission of greenhouse gasses. This is a

unique, cost-effective, noise-free, ease to install with low maintenance costs which is expected to drive the growth of the market during the forecast period.

MARKET HIGHLIGHTS

Solar PV Market is expected to reach USD 260.3 billion, growing at a CAGR of 5.2% during forecast period owing to the increasing awareness to utilize low carbon-intensive technologies for reducing carbon footprint which may boost the market growth. The increasing use of solar PV systems for supplying power to spacecraft and orbiting satellites is expected to drive the market growth. Increasing government initiatives for the promotion of solar PV systems use to decrease the dependency on fossil fuels may also uplift the market growth. The increasing demand for continuous and sustainable electric supply along with increasing electrical industry may drive growth of the market.
