Surrogacy is a process of assisted reproduction where the intended parents work with a

surrogate who carries the baby until delivery. Through In-vitro Fertilization (IVF), the embryos are created in laboratory by combining the sperm with the egg at a fertility clinic. The intended parents may use their own genetic material and the embryos are planted into the surrogate mother to carry the baby until delivery. Gestational surrogacy is helpful for those who are unable to conceive and become parents. People who inspect surrogacy to have child are called as Intended Parents (IPs). Sometimes a donor is required for the process (may be egg or sperm) which require legal expertise and strong support throughout the journey.
