Market Overview

Data scraping is a method that enables professionals with a variety of tools to work with data, either by extracting, analyzing, or integrating. By efficiently extracting data from multiple websites or pulling data from a legacy system when an API is not available, data scraping is an efficient way to replace cumbersome and often ineffective programs or tasks performed by humans. The data collection can be used to collect large amounts of relevant information such as product reviews, contact information for specific companies or individuals, social media posts, and web content for your business use. Custom software collects and exports web data into a program which then integrates it with your business resources and workflow.
