

HNSCC [2017]: Bulletin #2

<https://marketpublishers.com/r/HA093EC9FAEEN.html>

Date: July 2017

Pages: 0

Price: US\$ 1,045.00 (Single User License)

ID: HA093EC9FAEEN

Abstracts

Gain new KOL insights on the latest events happening in head and neck squamous cell carcinoma (HNSCC): data from the Phase I/II ECHO-202/KEYNOTE-037 study of Incyte's IDO1 inhibitor epacadostat in combination with Keytruda (pembrolizumab; Merck & Co.) were presented at ASCO 2017; preliminary results from the ongoing Phase I/II ECHO-204 trial of epacadostat plus Opdivo (nivolumab; Bristol-Myers Squibb [BMS]) in patients with solid tumours, including HNSCC, were presented at ASCO 2017; Merck & Co. announced that the Phase III KEYNOTE-040 trial of Keytruda in previously treated patients with recurrent or metastatic HNSCC failed to meet its primary endpoint of overall survival (OS).

Business Questions:

How do KOLs view the data from the Phase I/II ECHO-202/KEYNOTE-037 study of epacadostat in combination with Keytruda?

Where will Keytruda/epacadostat be most likely used in the HNSCC treatment algorithm?

How do KOLs view the data from the Phase I/II ECHO-204 trial of epacadostat in combination with Opdivo?

What potential does Opdivo/epacadostat hold as a treatment approach for HNSCC and where will it be most likely incorporated into the treatment paradigm?

How does Keytruda/epacadostat compare with Opdivo/epacadostat as potential combination treatment regimens for HNSCC?

How do KOLs interpret the failure of the KEYNOTE-040 trial of Keytruda to meet its primary endpoint of OS and what bearing will this have on its continued use in second-line treatment?
