Abstracts

Carbon removal, or carbon dioxide (CO₂) removal (CDR), encompasses both natural solutions such as sequestering and storing carbon in trees and soil, and technology that extracts CO₂ directly from the atmosphere. The Global Market for Carbon Dioxide Removal (CDR) 2024-2045 report provides a comprehensive analysis of the rapidly evolving CDR industry. The report offers in-depth insights into the current state of the CDR market, key technologies, market drivers, challenges, and future growth prospects.

The report provides an overview of the main sources of carbon dioxide emissions and the role of CDR in meeting climate targets. It explores the history and evolution of carbon markets and examines the mitigation costs of various CDR technologies. The market map provides a clear picture of the CDR landscape, highlighting the key players, technologies, and market segments. A significant focus of the report is on the growing importance of CDR in voluntary carbon markets and the increasing investments in CDR technologies. The market size analysis offers valuable projections for the CDR industry, segmented by technology and region, from 2023 to 2043.

The report covers main CDR methods, including conventional land-based approaches like afforestation, reforestation, and soil carbon sequestration, as well as novel technologies such as direct air capture and storage (DACCS), bioenergy with carbon capture and storage (BECCS), enhanced weathering, and ocean-based CDR. Each technology is thoroughly examined, covering its principles, applications, key players, projects, and cost analysis.

The carbon credits market is analyzed in detail, including the types of carbon credits, corporate commitments, government support and regulations, advancements in project verification and monitoring, and the potential for blockchain technology in carbon credit

trading. The report also explores the challenges and risks associated with the carbon credit market.

The company profiles section features over 130 leading companies in the CDR industry, providing valuable insights into their technologies, projects, and market strategies. Companies covered include Avnos, Banyu Carbon, Blusink, Brineworks, CarbonCure Technologies, Charm Industrial, Clairity Technology, Climeworks, EcoLocked GmbH, Ebb Carbon, Eion Carbon, Equatic, Graphyte, Greenlyte, Heirloom, Hyvegeo, Misson Zero, Noya, Octavia Carbon, Parallel Carbon, Pyro CSS GmbH, Qaptis, Ulysses Ecosystem Engineering and UNDO.

The report also includes a comprehensive SWOT analysis for each CDR technology, highlighting the strengths, weaknesses, opportunities, and threats. The future outlook for the CDR market is discussed, focusing on emerging trends, opportunities, and strategic recommendations for stakeholders. The report emphasizes the importance of supportive policies, research and development, and collaboration among industry players to accelerate the deployment of CDR technologies.

The Global Market for Carbon Dioxide Removal (CDR) 2024-2045 is an indispensable resource for businesses, investors, policymakers, and researchers seeking to understand the complex dynamics of the CDR industry. With its comprehensive analysis, detailed market insights, and strategic recommendations, this report enables stakeholders to make informed decisions and capitalize on the growing opportunities in the CDR market as the world transitions towards a low-carbon future.

Contents

1 ABBREVIATIONS

2 RESEARCH METHODOLOGY

2.1 Definition of Carbon Dioxide Removal

3 EXECUTIVE SUMMARY

3.1 Main sources of carbon dioxide emissions

3.2 CO₂ as a commodity

3.3 History and evolution of carbon markets

3.4 Meeting climate targets

3.5 Mitigation costs of CDR technologies

3.6 Market map

3.7 CDR in voluntary carbon markets

3.8 CDR investments

3.9 Market size

4 INTRODUCTION

4.1 Conventional CDR on land

4.1.1 Wetland and peatland restoration

4.1.2 Cropland, grassland, and agroforestry

4.2 Main CDR methods

4.3 Novel CDR methods

4.4 Market drivers

4.5 Value chain

5 CARBON CREDITS

5.1 Description

5.2 Types of Carbon Credits

5.2.1 Voluntary Carbon Credits

5.2.2 Compliance Carbon Credits

5.3 Corporate commitments

5.4 Increasing government support and regulations

5.5 Advancements in carbon offset project verification and monitoring

5.6 Potential for blockchain technology in carbon credit trading

5.7 Prices

5.8 Buying and Selling Carbon Credits

5.8.1 Carbon credit exchanges and trading platforms

5.8.2 Over-the-counter (OTC) transactions

5.8.3 Pricing mechanisms and factors affecting carbon credit prices

5.9 Certification

5.10 Challenges and risks

5.11 Market size

6 BIOMASS WITH CARBON REMOVAL AND STORAGE (BICRS)

6.1 Technology overview

6.2 Feedstocks

6.3 Biomass conversion

6.4 CO₂ capture technologies

6.5 Bioenergy with carbon capture and storage (BECCS)

6.6 BECCS facilities

6.7 Cost analysis

6.8 BECCS carbon credits

6.9 Challenges

7 DIRECT AIR CAPTURE AND STORAGE (DACCS)

7.1 Description

7.2 Deployment

7.3 Point source carbon capture versus Direct Air Capture

7.4 Technologies

7.4.1 Solid sorbents

7.4.2 Liquid sorbents

7.4.3 Liquid solvents

7.4.4 Airflow equipment integration

7.4.5 Passive Direct Air Capture (PDAC)

7.4.6 Direct conversion

7.4.7 Co-product generation

7.4.8 Low Temperature DAC

7.4.9 Regeneration methods

7.4.10 Commercialization and plants

7.4.11 Metal-organic frameworks (MOFs) in DAC

- 7.5 DAC plants and projects-current and planned
- 7.6 Markets for DAC
- 7.7 Cost analysis
- 7.8 Challenges
- 7.9 SWOT analysis
- 7.10 Players and production

8 ENHANCED WEATHERING

- 8.1 Overview
 - 8.1.1 Role of enhanced weathering in carbon dioxide removal
 - 8.1.2 CO₂ mineralization
- 8.2 Enhanced Weathering Processes and Materials
- 8.3 Enhanced Weathering Applications
- 8.4 Trends and Opportunities
- 8.5 Challenges and Risks
- 8.6 Cost analysis
- 8.7 SWOT analysis

9 AFFORESTATION/REFORESTATION

- 9.1 Overview
- 9.2 Carbon dioxide removal methods
- 9.3 Projects
- 9.4 Trends and Opportunities
- 9.5 Challenges and Risks
- 9.6 SWOT analysis

10 SOIL CARBON SEQUESTRATION (SCS)

- 10.1 Overview
- 10.2 Practices
- 10.3 Measuring and Verifying
- 10.4 Trends and Opportunities
- 10.5 Carbon credits
- 10.6 Challenges and Risks
- 10.7 SWOT analysis

11 BIOCHAR

- 11.1 What is biochar?
- 11.2 Carbon sequestration
- 11.3 Properties of biochar
- 11.4 Feedstocks
- 11.5 Production processes
 - 11.5.1 Sustainable production
 - 11.5.2 Pyrolysis
 - 11.5.2.1 Slow pyrolysis
 - 11.5.2.2 Fast pyrolysis
 - 11.5.3 Gasification
 - 11.5.4 Hydrothermal carbonization (HTC)
 - 11.5.5 Torrefaction
 - 11.5.6 Equipment manufacturers
- 11.6 Biochar pricing
- 11.7 Biochar carbon credits
 - 11.7.1 Overview
 - 11.7.2 Removal and reduction credits
 - 11.7.3 The advantage of biochar
 - 11.7.4 Prices
 - 11.7.5 Buyers of biochar credits
 - 11.7.6 Competitive materials and technologies
- 11.8 Bio-oil based CDR
- 11.9 SWOT analysis

12 OCEAN-BASED CARBON DIOXIDE REMOVAL

- 12.1 Overview
- 12.2 CO₂ capture from seawater
- 12.3 Ocean fertilisation
- 12.4 Ocean alkalinisation
- 12.5 Trends and Opportunities
- 12.6 Ocean-based carbon credits
- 12.7 Cost analysis
- 12.8 Challenges and Risks
- 12.9 SWOT analysis
