The Global Market for Metal and Metal Oxide Nanoparticles 2010-2027 brings you the very latest information and historical data on these advanced materials, covering production volumes, pricing, producers and end user market demand.

The properties of metal and metal oxide nanoparticles (also referred to as nanopowders or nanocrystals) display enhanced electrical, optical, magnetic and chemical properties from the bulk material of which they are made. Advances largely depend on the ability to synthesize nanoparticles of various materials, sizes, and shapes, as well as to efficiently assemble them into complex architectures. Most manufactured nanomaterials are available with varying shapes, sizes, composition, surface coatings and surface morphology. They offer a range of functionalities that are desirable in a number of sectors such as anti-bacterialism, anti-corrosion, easy-clean, thermal barrier, protective and UV-absorbent and combinations thereof.
