Abstracts

Microcrystalline Cellulose (MCC) Spheres are mainly used in the pharmaceutical industry. Other current or potential applications include cosmetic additives, food additives, paint additives, composites, packaging materials and insulation. In pharma applications they are used to bulk, disintegrate, bind, lubricate, enhance stability and extend drug release. As a natural, fibre-rich components, they are nontoxic and chewable. These properties can also be translated to other applications.

Report contents include:
