Abstracts

The global optical computing market is poised for significant growth and transformation in the next decade, driven by the ever-increasing demands of artificial intelligence (AI) and machine learning (ML) for immense computational power and speed. As traditional electronic computing approaches its physical limits, optical computing emerges as a promising solution to meet the growing computational needs of the future. Optical computing leverages the power of photons instead of electrons to process and transmit information, offering numerous advantages over conventional electronic systems. These benefits include high-speed data processing, parallel processing capabilities, low power consumption, high bandwidth, and reduced heat generation. Recent technological advances in silicon photonics and quantum optics have further accelerated interest in optical computing solutions.

The success of silicon photonics in datacom, telecom, and optical I/O applications has paved the way for its adoption in computing. Additionally, advances in new high-performance materials such as thin-film lithium niobate (TFLN) and silicon nitride (SiN) have sparked growing interest in using photons for information processing. The optical computing market encompasses a wide range of technologies, including photonic integrated circuits (PICs), optical processors, and quantum optical computing systems. Furthermore, the rapid advancements in quantum computing have positioned photons as one of the most promising options for qubits. Optical technologies play an integral role in the development of quantum computing, with quantum optics and photonic qubits being extensively researched for their potential to outperform traditional methods in quantum computations.

The Global Market for Optical Computing 2025-2035 offers an in-depth analysis of the rapidly evolving optical computing industry, poised to revolutionize data processing, artificial intelligence, and quantum technologies. This cutting-edge research provides valuable insights into market trends, technological advancements, and growth

opportunities in the optical computing sector over the next decade.

Report contents include:

Market Analysis and Forecasts:

Detailed global optical computing market size projections from 2025 to 2035

Segmentation by technology type, application, and geography

Analysis of key growth drivers and inhibitors

Competitive landscape and market share analysis

Technology Overview:

In-depth exploration of optical computing principles and architectures

Comparison of electronic and photonic integrated circuits

Analysis of photonic integrated circuit (PIC) key concepts and components

Overview of quantum computing concepts and their integration with optical technologies

Materials and Manufacturing:

Comprehensive analysis of optical computing materials, including silicon photonics, indium phosphide, and emerging platforms

Examination of manufacturing processes, integration schemes, and heterogeneous integration techniques

Evaluation of key manufacturers and foundries in the optical computing ecosystem

Optical Computing Technologies:

Detailed analysis of photonic integrated circuits (PICs), optical processors, and

quantum optical computing

Exploration of optical interconnects and advanced packaging technologies

Assessment of co-packaged optics (CPO) and its market implications

Applications and Use Cases:

In-depth examination of optical computing applications in data centers, telecommunications, quantum computing, automotive, aerospace, healthcare, and industrial sensing

Analysis of market potential and adoption trends across various sectors

Case studies highlighting successful implementations and research breakthroughs

Market Forecasts:

Granular market forecasts for PIC technologies, optical processors, and quantum optical computing

Segmentation by material platform, data rate, and application area

Regional market analysis covering North America, Europe, Asia-Pacific, and Rest of the World

Technology Trends and Future Outlook:

Exploration of emerging technologies in optical computing

Analysis of integration trends and scalability improvements

Roadmaps for various optical computing technologies, including PICs, optical processors, and quantum optical computing

Challenges and Opportunities:

Comprehensive analysis of technical and market challenges facing the optical

computing industry

Identification of key opportunities in data center acceleration, 5G/6G communications, quantum technologies, and green computing initiatives

Company Profiles:

Detailed profiles of over 90 companies active in the optical computing market. Companies profiled include 3E8, AIM Photonics, Akhetonics, AMO, AQT, Astrape Networks, Atom computing, Black Semiconductor, Bosch, CamGraPhIC, Celestial AI, Cognifiber, Cornerstone, Crystal Quantum Computing, Dawn Semiconductor, Duality, DustPhotonics, EFFECT Photonics, eleQtron, Ephos, Exail Quantum Sensors, Finchetto, GlobalFoundries, Google, Hегuang Microelectronics Technology, Hongguang Xiangshang, Hyperlight, IBM, ID Quantique, Infineon Technologies AG, Inflection, IonQ, Ipronic, Ligentec, Lightelligence, Lightium AG, LightMatter, LightON, Lightsolver, Liobate Technologies, LioniX, Lumai, Luminous Computing, Luxtelligence SA, Microsoft, Miraex, M Squared Lasers, Myrias Optics, Nanofiber Quantum Technologies, NcodiN, Neurophos, New Origin, NLM Photonics, NTT, Nvidia, Optalysys, ORCA Computing, Oriole Networks, ORI Chip, Oxford Ionics, Pasqal, PhotonDelta, Photonic, PhotonSpot, Planqc, Polaris Electro-Optics, PsiQuantum, Q.ANT, Qbosen, QC82, QCI, Quandela, Quantinuum, Quantum Art, Quantum Opus, Quantum Transistors, Qudoor, Qudora Technologies, QuEra Computing, Qianmu Laser, Quix, Ranovus, Saliencе Labs, Scintil Photonics, SilTerra, Single Quantum, SMART Photonics, Sparrow Quantum ApS, SteerLight, Toshiba, Tower Semiconductors, TundraSystems, TuringQ, Universal Quantum, Vector Photonics, X fab, Xanadu, Xscape Photonics.

Analysis of key players, start-ups, and emerging companies across the value chain

As the demand for high-performance computing, AI, and machine learning continues to grow exponentially, traditional electronic computing faces increasing limitations in speed, power consumption, and heat generation. Optical computing emerges as a promising solution to these challenges, offering the potential for faster data processing, improved energy efficiency, and enhanced performance in various applications.

This report is essential for:

Technology Companies: Gain insights into the latest advancements in optical computing and identify potential partnership or investment opportunities.

Investors: Understand market trends, growth projections, and key players in the optical computing ecosystem to make informed investment decisions.

Data Center Operators: Explore how optical computing technologies can enhance data center performance, reduce energy consumption, and meet growing computational demands.

Telecommunications Companies: Learn about the role of optical computing in advancing 5G and 6G technologies and improving network infrastructure.

Automotive and Aerospace Industries: Discover how optical computing can revolutionize LiDAR systems, autonomous vehicles, and aerospace applications.

Healthcare and Biomedical Sectors: Understand the potential of optical computing in advancing medical imaging, biosensors, and point-of-care diagnostics.

Research Institutions: Stay informed about the latest developments in quantum optical computing and identify areas for future research and collaboration.

Policy Makers: Gain insights into the regulatory landscape surrounding optical computing and its potential impact on various industries.

By providing a comprehensive analysis of the global optical computing market from 2025 to 2035, this report equips stakeholders with the knowledge and insights needed to navigate the rapidly evolving landscape of photonic and quantum technologies. From market forecasts and technology trends to challenges and opportunities, *The Global Market for Optical Computing 2025-2035* is an indispensable resource for anyone looking to understand and capitalize on the transformative potential of optical computing in the coming decade.

Contents

1 EXECUTIVE SUMMARY

- 1.1 Market snapshot
- 1.2 Market map
- 1.3 Technology Status
 - 1.3.1 Current Market State of Optical Computing
 - 1.3.2 Photonic Integrated Circuits (PICs) Maturity
- 1.4 Future Outlook
 - 1.4.1 Short-term Projections (2025-2027)
 - 1.4.2 Medium-term Outlook (2028-2031)
 - 1.4.3 Long-term Vision (2032-2035)

2 INTRODUCTION AND KEY CONCEPTS

- 2.1 Technology Background
 - 2.1.1 What is Optical Computing?
 - 2.1.1.1 Historical Context
 - 2.1.1.2 Basic Principles of Optical Computing
 - 2.1.2 Photonics versus Electronics
 - 2.1.2.1 Speed and Bandwidth Comparison
 - 2.1.2.2 Energy Efficiency Considerations
 - 2.1.2.3 Integration Challenges
 - 2.1.3 Electronic and Photonic Integrated Circuits Compared
 - 2.1.3.1 Architectural Differences
 - 2.1.3.2 Performance Characteristics
 - 2.1.3.3 Manufacturing Considerations
 - 2.1.4 Advantages and Challenges of Optical Computing
 - 2.1.4.1 Speed and Bandwidth Advantages
 - 2.1.4.2 Energy Efficiency Benefits
 - 2.1.4.3 Integration and Miniaturization Challenges
 - 2.1.4.4 Cost Considerations
- 2.2 Photonic Integrated Circuit (PIC) Key Concepts
 - 2.2.1 Optical IO, Coupling and Couplers
 - 2.2.1.1 Fiber-to-Chip Coupling
 - 2.2.1.2 On-Chip Optical Couplers
 - 2.2.2 Emission and Photon Sources/Lasers
 - 2.2.2.1 Semiconductor Lasers

- 2.2.2.2 Integration of Light Sources on PICs
- 2.2.3 Detection and Photodetectors
 - 2.2.3.1 Types of Photodetectors
 - 2.2.3.2 Integration Challenges for Detectors
- 2.2.4 Modulation and Modulators
 - 2.2.4.1 Electro-optic Modulators
 - 2.2.4.2 Thermo-optic Modulators
 - 2.2.4.3 All-optical Modulators
- 2.2.5 Light Propagation and Waveguides
 - 2.2.5.1 Waveguide Structures
 - 2.2.5.2 Loss Mechanisms in Optical Waveguides
- 2.2.6 PIC Architecture
 - 2.2.6.1 Monolithic Integration
 - 2.2.6.2 Hybrid Integration
 - 2.2.6.3 Heterogeneous Integration
- 2.3 Quantum Computing Concepts
 - 2.3.1 Introduction to Quantum Computing
 - 2.3.1.1 Quantum Bits (Qubits)
 - 2.3.1.2 Quantum Gates and Circuits
 - 2.3.2 Quantum Computing Architectures Overview
 - 2.3.2.1 Superconducting Qubits
 - 2.3.2.1.1 Technology description
 - 2.3.2.1.2 Materials
 - 2.3.2.1.3 Market players
 - 2.3.2.2 Trapped Ions
 - 2.3.2.2.1 Technology description
 - 2.3.2.2.2 Materials
 - 2.3.2.2.2.1 Integrating optical components
 - 2.3.2.2.2.2 Incorporating high-quality mirrors and optical cavities
 - 2.3.2.2.2.3 Engineering the vacuum packaging and encapsulation
 - 2.3.2.2.2.4 Removal of waste heat
 - 2.3.2.2.3 Market players
 - 2.3.2.3 Photonic Qubits
 - 2.3.2.3.1 Technology description
 - 2.3.2.3.2 Market players
 - 2.3.2.4 Neutral Atoms
 - 2.3.2.4.1.1 Technology description
 - 2.3.2.4.1.2 Market players
 - 2.3.2.5 Topological Qubits

2.3.2.5.1 Technology description

2.3.2.5.2 Market players

3 MATERIALS AND MANUFACTURING

3.1 Optical Computing Materials

3.1.1 Silicon and Silicon-on-Insulator (SOI)

3.1.1.1 Properties and Advantages

3.1.1.2 Limitations and Challenges

3.1.1.3 Key Players and Developments

3.1.2 Silicon Nitride (SiN)

3.1.2.1 Optical Properties

3.1.2.2 Manufacturing Processes

3.1.2.3 Applications and Market Adoption

3.1.3 Indium Phosphide

3.1.3.1 Material Characteristics

3.1.3.2 Integration Challenges

3.1.3.3 Market Players and Products

3.1.4 Organic Polymer on Silicon

3.1.4.1 Advantages of Polymer-based PICs

3.1.4.2 Manufacturing Techniques

3.1.5 Thin Film Lithium Niobate

3.1.5.1 Electro-optic Properties

3.1.5.2 Fabrication Methods

3.1.5.3 Emerging Applications

3.1.6 Barium Titanate and Rare Earth Metals

3.1.6.1 Novel Properties for Optical Computing

3.1.6.2 Integration Challenges

3.1.6.3 Future Prospects

3.1.7 Emerging PIC materials

3.1.8 Metasurfaces

3.1.9 Neuromorphic photonics

3.1.10 Materials Comparison and Benchmarking

3.1.10.1 Performance Metrics

3.1.10.2 Cost Analysis

3.1.11 Wafer Sizes and Processing

3.1.11.1 Current Wafer Size Trends

3.1.11.2 Scaling Challenges

3.1.12 Integration Schemes

- 3.1.12.1 Monolithic Integration
- 3.1.12.2 Hybrid Integration
- 3.1.12.3 Heterogeneous Integration
- 3.1.13 Heterogeneous Integration Techniques
 - 3.1.13.1 Wafer Bonding
 - 3.1.13.2 Flip-Chip Bonding
 - 3.1.13.3 Micro-Transfer Printing
- 3.1.14 The PIC Design Cycle: Multi-Project Wafers
 - 3.1.14.1 Design Tools and Software
 - 3.1.14.2 Fabrication Services
 - 3.1.14.3 Testing and Packaging
- 3.2 Key Manufacturers and Foundries
 - 3.2.1 Pure-Play PIC Foundries
 - 3.2.2 Integrated Device Manufacturers (IDMs)

4 OPTICAL COMPUTING TECHNOLOGIES

- 4.1 Photonic Integrated Circuits (PICs)
 - 4.1.1 PIC Architectures
 - 4.1.1.1 Planar Lightwave Circuits
 - 4.1.1.2 3D Integrated Photonics
 - 4.1.2 Integration Schemes of PICs
 - 4.1.2.1 Monolithic Integration
 - 4.1.2.2 Hybrid Integration
 - 4.1.2.3 Heterogeneous Integration
 - 4.1.3 Operational Frequency Windows of Optical Materials
 - 4.1.3.1 Visible Light PICs
 - 4.1.3.2 Near-Infrared PICs
 - 4.1.3.3 Mid-Infrared PICs
- 4.2 Optical Processors
 - 4.2.1 Digital Optical Computing
 - 4.2.1.1 All-Optical Logic Gates
 - 4.2.1.2 Optical Flip-Flops and Memory
 - 4.2.2 Analog Optical Computing
 - 4.2.2.1 Optical Matrix Multiplication
 - 4.2.2.2 Fourier Optics and Signal Processing
 - 4.2.3 Neuromorphic Photonics
 - 4.2.3.1 Optical Neural Networks
 - 4.2.3.2 Reservoir Computing

4.3 Quantum Optical Computing

4.3.1 Photonic Platform for Quantum Computing

4.3.1.1 Single-Photon Sources

4.3.1.2 Quantum Gates and Circuits

4.3.1.3 Photon Detection Technologies

4.3.2 Comparison with Other Quantum Computing Architectures

4.3.2.1 Advantages of Photonic Qubits

4.3.2.2 Scaling Challenges

4.3.2.3 Error Correction in Photonic Quantum Computing

4.3.3 Quantum PIC Requirements and Roadmap

4.3.3.1 Current State of Quantum PICs

4.4 Optical Interconnects

4.4.1 On-Device Interconnects

4.4.1.1 Chip-to-Chip Optical Interconnects

4.4.1.2 On-Chip Optical Interconnects

4.4.2 Data Center Interconnects

4.4.2.1 Rack-to-Rack Interconnects

4.4.2.2 Inter-Data Center Interconnects

4.5 Advanced Packaging and Co-Packaged Optics

4.5.1 Evolution of Semiconductor Packaging

4.5.1.1 2D to 2.5D Packaging

4.5.1.1.1 Silicon Interposer 2.5D

4.5.1.1.1.1 Through Si Via (TSV)

4.5.1.1.1.2 (SiO₂) based redistribution layers (RDLs)

4.5.1.1.2 2.5D Organic-based packaging

4.5.1.1.2.1 Chip-first and chip-last fan-out packaging

4.5.1.1.2.2 Organic substrates

4.5.1.1.2.3 Organic RDL

4.5.1.1.3 2.5D glass-based packaging

4.5.1.1.3.1 Benefits

4.5.1.1.3.2 Glass Si interposers in advanced packaging

4.5.1.1.3.3 Glass material properties

4.5.1.1.3.4 2/2 μm line/space metal pitch on glass substrates

4.5.1.1.3.5 3D Glass Panel Embedding (GPE) packaging

4.5.1.1.3.6 Thermal management

4.5.1.1.3.7 Polymer dielectric films

4.5.1.1.3.8 Challenges

4.5.1.1.3.9 Comparison with other substrates

4.5.1.1.4 2.5D vs. 3D Packaging

- 4.5.1.1.5 Benefits
- 4.5.1.1.6 Challenges
- 4.5.1.1.7 Trends
- 4.5.1.1.8 Market players
- 4.5.1.2 3D Packaging Technologies
 - 4.5.1.2.1 Overview
 - 4.5.1.2.1.1 Conventional 3D packaging
 - 4.5.1.2.1.2 Advanced 3D Packaging with through-silicon vias (TSVs)
 - 4.5.1.2.1.3 Three-dimensional (3D) hybrid bonding
 - 4.5.1.2.1.4 Devices using hybrid bonding
 - 4.5.1.2.2 3D Microbump technology
 - 4.5.1.2.2.1 Technologies
 - 4.5.1.2.2.2 Challenges
 - 4.5.1.2.2.3 Bumpless copper-to-copper (Cu-Cu) hybrid bonding
 - 4.5.1.2.2.4 Trends
- 4.5.2 Co-Packaged Optics (CPO) Technology
 - 4.5.2.1 CPO Architectures
 - 4.5.2.2 Benefits and Challenges of CPO
- 4.5.3 CPO Market Players and Developments

5 MARKETS AND APPLICATIONS

- 5.1 Data Centers and High-Performance Computing
 - 5.1.1 Optical Transceivers for Data Centers
 - 5.1.1.1 Current and Future Data Rates
 - 5.1.1.2 Form Factors and Standards
 - 5.1.2 PIC-based Transceivers for AI and Machine Learning
 - 5.1.2.1 AI Accelerator Interconnects
 - 5.1.2.2 High-Bandwidth Memory Interfaces
 - 5.1.3 Photonic Engines and Accelerators for AI
 - 5.1.3.1 Optical Matrix Multiplication Engines
 - 5.1.3.2 Photonic Tensor Processing Units
- 5.2 Telecommunications
 - 5.2.1 5G and Beyond
 - 5.2.1.1 Fronthaul and Backhaul Networks
 - 5.2.1.2 Millimeter-Wave Photonics
 - 5.2.2 Optical Networking Equipment
 - 5.2.2.1 Optical Switches and Routers
 - 5.2.2.2 Wavelength Division Multiplexing (WDM) Systems

5.3 Quantum Computing and Communication

5.3.1 Quantum Key Distribution

5.3.1.1 Discrete Variable vs. Continuous Variable QKD Protocols

5.3.2 Quantum Sensing

5.3.2.1 Quantum Magnetometers

5.3.2.2 Quantum Gravimeters

5.3.2.2.1 Applications

5.3.2.2.2 Key players

5.4 Automotive and LiDAR

5.4.1 PIC-based LiDAR Systems

5.4.1.1 Coherent LiDAR

5.4.1.2 Flash LiDAR

5.4.2 Autonomous Vehicle Applications

5.4.2.1 Object Detection and Tracking

5.4.2.2 HD Mapping and Localization

5.5 Aerospace and Defense

5.5.1 Optical Gyroscopes

5.5.2 Free-Space Optical Communications

5.6 Healthcare and Biomedical

5.6.1 PIC-based Biosensors

5.6.1.1 Lab-on-a-Chip Devices

5.6.1.2 Point-of-Care Diagnostics

5.6.2 Medical Imaging

5.6.2.1 Optical Coherence Tomography (OCT)

5.6.2.2 Photoacoustic Imaging

5.7 Industrial Sensing and IoT

5.7.1 Gas and Chemical Sensors

5.7.1.1 Environmental Monitoring

5.7.1.2 Process Control in Manufacturing

5.7.1.3 Structural Health Monitoring

5.7.1.4 Fiber Optic Sensors for Infrastructure

5.7.1.5 Distributed Acoustic Sensing

6 MARKET ANALYSIS AND FORECASTS

6.1 Global Optical Computing Market Overview

6.1.1 Historical Market Trends

6.1.2 Market Size and Growth Projections (2025-2035)

6.1.3 Key Growth Drivers and Inhibitors

6.2 Market Segmentation

6.2.1 By Technology Type

6.2.1.1 Photonic Integrated Circuits

6.2.1.2 Optical Processors

6.2.1.3 Quantum Optical Computing

6.2.2 By Application

6.2.2.1 Data Centers and HPC

6.2.2.2 Telecommunications

6.2.2.3 Automotive and LiDAR

6.2.2.4 Healthcare and Biomedical

6.2.3 By Geography

6.2.3.1 North America

6.2.3.2 Europe

6.2.3.3 Asia-Pacific

6.2.3.4 Rest of the World

6.3 PIC Market Forecasts

6.3.1 PIC Market by Material Platform

6.3.1.1 Silicon Photonics

6.3.1.2 Indium Phosphide

6.3.1.3 Silicon Nitride

6.3.1.4 Others

6.3.2 PIC-based Transceiver Market

6.3.2.1 By Data Rate

6.3.2.2 By Application

6.3.3 PIC for AI and Data Centers

6.3.3.1 AI Accelerator Interconnects

6.3.3.2 High-Performance Computing

6.3.4 PIC for Telecommunications

6.3.4.1 5G and Beyond

6.3.4.2 Optical Networking Equipment

6.3.5 Quantum PIC Market

6.3.5.1 Quantum Computing

6.3.5.2 Quantum Communications

6.3.6 PIC-based Sensor and LiDAR Markets

6.3.6.1 Automotive LiDAR

6.3.6.2 Industrial Sensing

6.4 Optical Processor Market Forecasts

6.4.1 By Type (Digital, Analog, Neuromorphic)

6.4.2 By Application

6.5 Quantum Optical Computing Market Forecasts

6.5.1 By Type of Quantum Technology

6.5.2 By Application Area

7 TECHNOLOGY TRENDS AND FUTURE OUTLOOK

7.1 Emerging Technologies in Optical Computing

7.1.1 All-Optical Computing

7.1.2 Neuromorphic Photonics

7.1.3 Quantum Photonics

7.2 Integration Trends

7.2.1 Photonic-Electronic Integration

7.2.2 3D Integration for Optical Computing

7.3 Scalability and Manufacturability Improvements

7.3.1 Advanced Manufacturing Techniques

7.3.2 Automated Testing and Packaging

7.4 Advances in Quantum Optical Computing

7.4.1 Scalable Quantum Photonic Architectures

7.4.2 Quantum Error Correction in Optical Systems

7.5 The Role of AI in Optical Computing Design

7.5.1 AI-assisted PIC Design

7.5.2 Optimization of Optical Neural Networks

7.6 Roadmaps for Various Optical Computing Technologies

7.6.1 PIC Technology Roadmap

7.6.2 Optical Processor Roadmap

7.6.3 Quantum Optical Computing Roadmap

8 CHALLENGES AND OPPORTUNITES

8.1 Technical Challenges

8.1.1 Efficiency and Power Consumption

8.1.2 Integration and Packaging

8.1.3 Scalability and Yield

8.2 Market Challenges

8.2.1 Cost Competitiveness

8.2.2 Adoption Barriers

8.2.3 Standardization Issues

8.3 Opportunities

8.3.1 Data Center and AI/ML Acceleration

8.3.2 5G and 6G Communications

8.3.3 Quantum Technologies

8.3.4 Green Computing Initiatives

8.4 Environmental Regulations and Sustainability

8.4.1 Energy Efficiency Standards

8.4.2 Material Usage and Recycling Policies

9 COMPANY PROFILES 314 (98 COMPANY PROFILES)

10 APPENDICES

10.1 Glossary of Terms

10.2 12. List of Abbreviations

10.3 Research Methodology

Product name: The Global Market for Optical Computing 2025-2035

Product link: <https://marketpublishers.com/r/G3B2CA62E08EEN.html>

Price: US\$ 1,300.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer Service:

info@marketpublishers.com

Payment

To pay by Credit Card (Visa, MasterCard, American Express, PayPal), please, click button on product page <https://marketpublishers.com/r/G3B2CA62E08EEN.html>
